Quality is our Business

Aspire Services

Aspire Services, is a service provider for software and online businesses. We conduct engineering and QC testing services for our clients. We also provide Back-End Support and Services, including Web Content Maintenance, Customer Support and Remote Network Support.

We provide independent, objective and comprehensive engineering and testing services for your software and web applications. We value quality as the purpose and pursuit of our business excellence. Our diversified knowledgebase is derived out of our cumulative experience. It expresses itself as our commitment to quality, concern for the client and passion towards our purpose.

We believe that our 'real' deliverables are the 'intangible' ones – objectivity, timeliness, process customization, meticulousness. They translate as tangible values for you – dollar saved and quality built leading to user delight.

This collaborative outsourcing or, partnership-in-purpose with you, is what sustains us; what continues to build us.

We work together
to make you succeed

Our Services

We undertake the following on your behalf,
depending on your need

Application Engineering

Our activity includes designing and developing applications and web management tools. Our established Engineering methodology ensures a Cost Advantage with assured Quality Deliverables. Our professionals employ N-tier architecture including Prototyping, Use case/ Class/ Activity Diagrams and (BI) Business Intelligent report generation. Our coding standards are ensured using the Libraries and Templates. Our team includes professionals in all levels of Application Architecture including UI specialists, Business Analysts, Architects, DB Architects, BI Reporting and Integration specialists using cutting edge methodologies such as BizTalk and MSF. At the backend we also have professionals trained in Application Maintenance and Support.

Quality Assurance/ Control

Our Quality professionals provide independent, objective, meticulous and comprehensive Analysis, Testing and Quality Management of the client website/ application. Our testing and analyzing methodologies ensure that your existing product standards are consistently maintained. Our process customization enforces, supports, and facilitates configuration management and change management. We provide facilities and resources for testing End-to-End aspects of the application - White/ Grey box testing, Functionality Testing, Compatibility Testing, Usability Testing, Integrity Testing, Regression Testing, Load/ Stress Testing, Performance Testing, Security Testing, Backup and Recovery Testing. Our professionals have developed, implemented and audited various SDLC/ IT processes internally as well as on behalf of our clients

Maintenance and Support

Our Maintenance/ Support professionals are highly trained and can seamlessly integrate with the Client requirements and specifications. We develop effective training/ evaluation programs that enable shortest turnaround time. Our teams of professionals provide the range of maintenance and support from Network support to Content Maintenance to Customer Support. Each of the separate teams are recruited and trained exclusively for the client. We also have technology professionals who conduct the full spectrum of IT Auditing - from Server configuration to Network Integrity to Performance Optimization.

Our Mission is to provide state-of-art, customized, and cost effective software engineering and testing services that help organizations improve their capacity and quality by deploying cutting-edge technologies and implementation methodologies.

Our evolving assets and the growing one

" Working with this team is like having a well oiled machine. We all draw on each other's experience and work together to fulfill the needs of the clients. The clients are happy with a bug-free application means we have all done our jobs."

Feras Abu Muwis

Advantage Aspire

COST SAVING:

We will ensure a cost-effective operation, whereby both establishing a team and running costs are reduced.

QUALITY:

We have mature and customizable quality systems as well as the internationally accepted good practices, such as CMM, and are abiding by them.

NO DAY-TO-DAY MANAGEMENT:

You will be able to focus on the core business activity, by delegating, without getting into the rigmarole of day-to-day management issues. We take adequate care by implicitly following your specified requirements.

OPTIMAL CAPACITY UTILIZATION:

We put our team to the best use, while maintaining a fluid organizational structure, relocating, cutting back or adding on, as required.

CONTROL:

Since we have a thorough understanding of the operational and systemic requirements of software and Internet businesses, we ensure ample control is exercised on the deliverables. Depending on the agreement, we are also amenable to discussions on additional management control.

FOCUS ON DELIVERY:

You will have the advantage of specifying the needs and getting the needs addressed. This will translate as direct savings in terms of management and IT costs.

ECONOMIES OF SCALE:

You will easily be able to upsize or downsize in accordance with the requirements within a short time-span. Where more complex or substantial requirement is needed, we can easily tune our team to fulfill the need.
